

Industrial Machinery & OEMs

Enhanced performance, reliability and longevity to minimise downtime

O-Rings

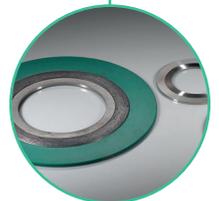

Bonded Seals

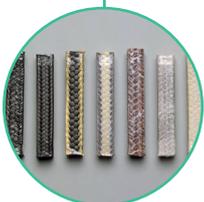

Bespoke Machined
Seals

Rotary / Lip Seals

Gaskets

Gland Packings

Mechanical Seals

U-Rings

Shaft Seals /
Oil Seals

V-Rings

Advanced sealing solutions designed to enhance the performance, reliability and longevity of industrial machinery and minimise downtime.

SEALING PRODUCTS

You need durable, high-performance components to ensure your machinery delivers reliable results. Our sealing solutions, both standard and customised, are precision engineered to meet the rigorous demands of industrial machinery.

Whether you are manufacturing pumps, engines, compressors, or heavy machinery, the need for reliable sealing solutions is critical to ensuring the optimal functioning and durability of your products. Our sealing solutions are designed to address a broad range of applications, offering robust performance even in the harshest environments.

From static seals and o-rings to gaskets and hydraulic seals, we have a wide range of sealing products for any application.

CUSTOM SEALING SOLUTIONS

Every industrial machinery application is unique, so one size does not fit all. We work closely with you to create custom sealing solutions tailored to specific application needs. Our engineering team has the expertise to design seals that match your equipment's exact specifications, no matter how complex.

Whether you require seals for **high-speed bearings**, **fluid power systems**, or **complex multi-component equipment**, we have the capabilities to create sealing solutions that fit perfectly, perform reliably, and extend the lifecycle of your machinery.

We provide a design support service to create bespoke seal designs based on your application, materials, and performance criteria. We can create prototypes for testing under real-world conditions before full-scale production in our in-house manufacturing facilities. With a streamlined prototyping and testing process, we deliver quick turnaround times, allowing you to meet your project deadlines with ease.

MATERIALS

- PEEK / PEKK / VESPEL™
- XNBR
- EPR / EPDM
- Fabric Reinforced Composite (FRC)
- FPM / FKM / Viton™
- Fluoropolymers (PCTFE)
- POM / PA / PE
- HNBR / HSN
- Metal Detectable
- Nitrile Rubber (NBR)
- FFKM™
- PTFE / Teflon™
- PU / TPU
- Silicone Rubber (VMQ)
- TFE/P, FEPM, Aflas™

QUALITY YOU CAN TRUST

Our quality department, which includes our test laboratory, is responsible for maintaining high standards of product quality and compliance, and validating our products to meet industry standards.

We are proud to be certified in several areas for quality, health and safety and environmental management.

- ISO 9001:2015
- ISO 45001:2018
- ISO 14001:2015
- EN 9120:2018
