## Description

M Seals material EC805 is a metal and X-Ray detectable, peroxide cured Ethylene-Propylene-Diene-Monomer (EPDM). The material has been migration tested in accordance with FDA 21 CFR 177.2600 while also meeting the requirements of EC1935/2004 and 3-A 18-03 Class 3 regulations. These fantastic attributes make EC805 the material of choice for seals and other elastomeric parts being used in food contact applications where contamination is absolutely unacceptable. EC805 EPDM Rubber has excellent resistance to hot water, steam and some cleaning agents. However, this compound or any EPDM should not be used where the presence of Hydrocarbon fluids, vegetable oils and/or animal fats will be found. Please contact the M Seals technical team if you require assistance.
